Presentation Date:	Monday, 7 May 2018 8:00 AM - 9:00 AM & 1:00 PM - 2:00 PM
Venue	SMX CONVENTION CENTER MANILA Function Room 5
Presentation Title:	MINISCREW FOR CLASS II & III MALOCCLUSION
Abstract	<p>Nowadays, along with wires and brackets, the mini-screw has become an indispensable device and it is no longer an auxiliary device in our daily orthodontic practice. Following leveling and alignment in comprehensive orthodontic treatment, it is very important to ensure the differential upper and lower inter-arch tooth movement for better treatment outcome. The control of this differential inter-arch tooth movement is more crucial in Class II or Class III situations. In the past, extra-oral traction and/or inter-maxillary elastics were used for this purpose. But now, the mini-screw has become a more preferred choice of device because it can produce more predictable and better outcomes with minimal patient's cooperation. So in this presentation, I will show and discuss the various applications of the mini-screw in Class II & Class III malocclusion cases.</p>
